tabtomd

v1.0.2

NAME

tabtomd - Convert tab delimited data to Markdown table

SYNOPSIS

tabtomd [**COMMAND**] [**OPTIONS**]

DESCRIPTION

`tabtomd` is a versatile command-line utility for converting tab-delimited text into Markdown table format. It supports input from either the system clipboard or a specified file and allows the output to be written to standard output or saved to a file.

The tool includes an optional `--pretty` flag to align vertical bars in the Markdown table, improving readability and presentation. It is especially useful for generating Markdown tables for documentation, reports, or other structured data presentations.

COMMANDS

completion Generate an autocompletion script for the specified shell.

file Convert a tab-delimited file to a Markdown table.

help Display help information for any command.

paste Convert tab-delimited data from the system clipboard.

version Display the `tabtomd` version and build information.

FLAGS

--output ***string*** Specify a file to save the generated Markdown table.

--pretty Align vertical bars in the Markdown table for better readability.

--print Print the Markdown table to standard output.

EXAMPLES

Convert a tab-delimited file to a Markdown table and print it to the screen

```
tabtomd file tsv_file.txt --print
```

Convert a tab-delimited file to an aligned Markdown table and print it to the screen

```
tabtomd file tsv_file.txt --pretty --print
```

Convert a tab-delimited file to an aligned Markdown table and save it to a file

```
tabtomd file tsv_file.txt --output markdown_table.md --pretty
```

Convert tab-delimited text from the clipboard to a Markdown table and print it to the screen

```
tabtomd paste --print
```

Convert tab-delimited text from the clipboard to an aligned Markdown table and print it to the screen

```
tabtomd paste --pretty --print
```

Convert tab-delimited text from the clipboard to an aligned Markdown table and save it to a file

```
tabtomd paste --output markdown_table.md --pretty
```

Display help for the `file` command

`tabtomd file --help` **OR** `tabtomd help file`
